Heuchera

wide range of colours

Purple bellflower (Heuchera) is a versatile, evergreen perennial that is used year-round in colorful bedding and balcony arrangements, as an unusual groundcover, or in Green Wall plantings as a structural element both indoors and out. Although the plants have beautiful flowers, the real ornamental value is in the attractive highly variegated leaves.

For several years, Heuchera has enjoyed increasing popularity and there is an unmanageable abundance of varieties, with more being added each season. Through close cooperation with Heuchera producers and the propagation of various assortments, it became clear that a new clearly structured assortment, suitable in itself and available again, was lacking for rapid production despite the plenty of

varieties on the market.

For this reason, some years ago Bock started targeted breeding activities to improve this valuable perennial. With this catalogue we present the results:

Strong and healthy new varieties, uniformly programmable, in clear colours and just not particularly flowering in the first year of culture, so that the culture can be produced without grooming. Crossing, breeding selection, cloning and development of a vegetative in vitro propagation protocol have resulted in attractive clones in the important colour groups, which can be wonderfully cultivated together, pleasing both the producer and the consumer.

Why in vitro propagation with heuchera? sterile guarantee

Propagation by division is inefficient and by seed it does not give uniform progeny or cannot be done because many cultivars are infertile.

The advantage of vegetative propagation in vitro is that beautifully selected individual plants of absolutely uniform, healthy quality can be produced in high numbers. This means that you as a grower can start your culture with healthy growing starting material and know what the variety will look like when it is ready; in planned culture to the exact moment, programmable and uniform.

Guarantee a year-round colorful garden season with first-class quality, especially suitable for modern garden concepts. disease-free.
